                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 21, Application US/10396578

Publication No. US20040191260A1

GENERAL INFORMATION:

APPLICANT: Reiter. Voram

APPLICANT: Reiter. Voram

APPLICANT: Cohen, Cyrim

TITLE OF INVENTION: ANTIGEN PRESENTING MOLECULE/PATHOGEN-DERIVED ANTIGEN COMPLEXES

TITLE OF INVENTION: ANTIGEN PRESENTING MOLECULE/PATHOGEN-DERIVED ANTIGEN COMPLEXES

FILE REFERENCE: 25563

CURRENT PILLING DATE: 2003-03-26

NUMBER OF SEQ ID NOS: 97

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 122, Application US/09192854

Patent No. 6696245

GENERAL INFORMATION:
APPLICANT: Winter, Greg
APPLICANT: Tomlinson, Ian
TITLE OF INVENTION: Methods for Selecting Functional Peptides
CURRENT APPLICATION NUMBER: US/09/192,854

CURRENT APPLICATION NUMBER: US/09/192,854

CURRENT APPLICATION NUMBER: 60/066,729

EARLIER PILING DATE: 1999-11-21

NUMBER OF SEQ ID NOS: 212

SOFWARE: Patentin Ver. 2.0

SEQ ID NO 122
APPLICANT: Judice, J. Kevin
APPLICANT: Kirchhofer, Daniel
APPLICANT: Kirchhofer, Daniel
APPLICANT: Shelley
TITLE OWN: Suggett, Shelley
TITLE OWN: Human Anti-Factor IX/IXa Antibodies
FILE REFERENCE: P1661R2
CURRENT APPLICATION NUMBER: US/09/383,667
CURRENT FILING DATE: 1999-08-26
EARLIER APPLICATION NUMBER: US 60/098,233
EARLIER FILING DATE: 1999-08-28
EARLIER FILING DATE: 1999-03-03
NUMBER OF SEQ ID NOS: 32

WESULT Sequence 35, Application US/0956322C

| Sequence 35, Application US/0956322C
| Patent No. 6696E20
| GENERAL INFORMATION:
| APPLICANT: PRICYTE PHARMACEUTICALS, INC.
| APPLICANT: HIATT ANDREW C.
| APPLICANT: HIATT ANDREW C.
| TITLE OF INVENTION: IMMUNGLOBULIN BINDING PROTEIN ARRAYS IN PLANT CELLS
| FILE REPRENCE: 666904 -0501
| CURRENT FILING DATE: 2000-05-02
| PRIOR PELICATION NUMBER: PCT/US01/14349
| PRIOR PELICATION NUMBER: POT/US01/14349
| PRIOR PELICATION NUMBER: 09/563,222
| PRIOR PELICATION NUMBER: 09/563,222
| PRIOR PELICATION NUMBER: 09/563,222
| NUMBER OF SEQ ID NOS: 182
| SOFTWARE: Patentin Ver. 2.1
| SEQ ID NO 35
| LENGTH: 12
| TYPE: PRT
| ORGANISM: Mus musculus
